

## Why choose an Ovivo Ozzy Cup Drum Screen?

*The drive mechanism is a nylon pinion, which engages with a gear ring on the outside of the drum.*

*An installation at Coweta County, GA. The utility loves its performance and simplicity.*

*The Micro Ozzy is available off-the-shelf, is self-contained and will provide 2mm screening for up to 0.5MGD with 2mm .*

- ✓ **It's Highly Capable:** The Ovivo ProPaPanel design prevents hair pinning and can screen down to 0.5 millimeter without ever clogging!
- ✓ **In-Channel Fine Screening:** The Ozzy Cup can be easily retrofitted into existing channels of up to 5 feet deep. No more pumping up to rotary drum screens!
- ✓ **Low O&M Costs:** This screen runs intermittently and at very low speeds, so its power requirements are quite low. All of its moving parts are above the waterline which makes it extremely operator friendly and easy to maintain.
- ✓ **Proven:** Ovivo's large drum screen features have been incorporated into the Ozzy Cup for small to medium flows. It contains all the robust design characteristics that you have come to expect from an Ovivo product at a competitive price.

### ***Ovivo's Elite, In-Channel Screening Simplified for Smaller Flows!***

#### **Special Features**

- Flows up to 10 MGD
- Nylon panels and pinion gears will not corrode and are extremely durable
- Virtually all maintenance is above the waterline
- Simple to install and no special civil works are necessary
- The drum screen structure can be designed to support high differential loading without failure of the mesh panels
- Drum diameter—4' to 10' for channels 2' to 5' deep
- Fine screening from 6mm to 0.5 mm
